

Dear FCC Commissioners: As the President and CEO of Webformix Company, a small wireless internet service provider based in Bend, Oregon, I oppose the proposed increase of geographical PAL size to PEAs, as well as the lengthening of the license terms.

Webformix was the first 3.65 operator in Oregon. Today we serve over 2000 customers who rely on us for both residential and business services. We do this all without ANY subsidies or help from the government aside from access to spectrum. We depend on the unlicensed or lightly licensed frequency spectrum to provide internet service to our customers.

These proposed rule changes have made us hesitant to utilize the new CBRS band in the event that our access to it becomes restricted. Between the additional cost of specialized radio equipment that must talk to a SAS, and the fees for PAL's, we're unsure if we will be able to compete in the marketplace. We therefore oppose the proposed increase of geographical PAL size to PEAs, as well as the lengthening of the license terms, as this clearly benefits the larger national carriers while pushing out smaller, local carriers like Webformix.

The proposed changes would make it economically difficult, if not impossible, for Webformix to be competitive in PAL auctions and our investments thus far would be wasted. Please listen to the unified voices of the WISPA community and do not allow these proposed changes to pass.

Thank you for your time.

Respectfully,

Eric Ozrelic

President Webformix
